Tmpgenc is pronounced as Temp-Gen-C or Tempigenc, the correct spelling is actually "Tempgénéc" which means temp generation in French! It represents what they are doing to your files...which are taking your original file and converting it into a small file for watching on your portable device, mp3 player etc... so basically they are "generating" the video. Information about the Format The format is an open standard, which means it can be used by anyone to create software which supports the format. It is a patent free format, which was created to allow interoperability between devices and applications regardless of manufacturer. The patents have since expired globally. It does not have all of the features that other formats provide, but it allows for better compression without creating too much degradation in quality. tmpgenc video mastering works 6 keygen torrent
